

# COMPUTATIONAL JOURNAL 10 GREENHOUSE NO.1 - MOS NYC

This is Greenhouse No. 1 by MOS architects out of New York City. I just discovered MOS architects yesterday but I enjoy their almost childish looking colored pencil sketches, they must be honest people. I get really excited about small scale projects with a highly tectonic nature. I love to see structural connections as well interesting perforation in paneling material. It's always interesting to think about how projects go together physically, how easy are they to assemble, how many people would be required. I feel like this project kind embodies the "kit of parts" way of thinking which I feel is super important. As well as the fact that this project can be disassembled, moved, and re-assembled in a new location, love that.
