

TULIP CROSSING

Tulip Crossing is a proposed pedestrian bridge that reconnects West Oakland to Downtown across the former path of I-980. The project is part of a larger vision to repair the physical and social divides caused by decades of highway infrastructure. The bridge features colorful tulip-shaped columns designed to bring a sense of play and identity to the corridor. These sculptural supports offer a visual contrast to the heavy infrastructure that once defined the site, creating a new landmark rooted in joy, movement, and public life. As a key link in a network of walkable, bikeable streets, Tulip Crossing is more than a piece of infrastructure. It is a commitment to accessibility, equity, and the reinvestment in West Oakland's connections to the broader city.
